

PYTHON PRACTICAL 5

ROLL NO : S054	NAME : KOMAL YADAV
CLASS : SYIT	SUBMISSION : 21/07/26

Q1.

a. Write a recursive function to print the factorial for a given number.

CODE :

```
def fact(n):
    if n==0:
        return 1
    else:
        return n * fact(n-1)

num=int(input("Enter your number:"))

print("The factorial of a number is", fact(num))
print("KOMAL S049")
```

OUTPUT :

```
=====
Enter your number:3
The factorial of a number is 6
KOMAL S049
|
```

b. Write a function to check the input value is Armstrong or not.

CODE :

```
def armstrong(num):
    sum=0
    temp=num

    while(temp>0):
        digit=temp%10
        sum+=digit**3
        temp//=10

    if num==sum:
        print(num, "is a armstrong number")
    else:
        print(num, "is not a armstrong number")

num=int(input("Enter a number to check it is a armstrong number or not:"))
armstrong(num)
print("\nKOMAL S049")
|
```

OUTPUT :

```
-----  
Enter a number to check it is a armstrong number or not:1  
1 is a armstrong number
```

```
KOMAL S049  
|
```

```
----- RESTART: C:/Users/ANIL/OneDrive/Desktop/KOMAL  
Enter a number to check it is a armstrong number or not:4  
4 is not a armstrong number
```

```
KOMAL S049  
|
```

c. Write a function to check the input value is Palindrome or not .

CODE :

```
def palindrome (num) :  
    n=num  
    rev=0  
  
    while (num!=0) :  
        rev=rev*10  
        rev=rev+int (num%10)  
        num=num//10  
  
    if n==rev:  
        print (n, "is a palindrome number")  
    else:  
        print (n, "is not a palindrome number")  
  
num=int(input("Enter a number to check it is a palindrome number or not: "))  
palindrome (num)  
print("\nKOMAL S049")  
|
```

OUTPUT :

```
----- RESTART: C:/Users/ANIL/OneDrive/Desktop/KOMAL PYTHON  
Enter a number to check it is a palindrome number or not: 5  
5 is a palindrome number
```

```
KOMAL S049  
|
```

```
----- RESTART: C:/Users/ANIL/OneDrive/Desktop/KOMAL PYTHON/3  
Enter a number to check it is a palindrome number or not: 123  
123 is not a palindrome number
```

```
KOMAL S049  
|
```

d. Write a lambda function that checks whether a given string starts with a specific character.

CODE :

```
starts_with_char = lambda s,c: s.startswith(c)

print(starts_with_char("hello", "h"))

print(starts_with_char("hello", "t"))

print(starts_with_char("Python", "p"))
print("\nKOMAL S049")
```

OUTPUT :

```
===== KL
True
False
False

KOMAL S049
```

Q. 2. Write a python program to convert temperature from celcius to Fahrenheit. (Use the formula: (fahrenheit = (celsius * 9/5) + 32)

CODE :

```
celsius = float(input("Enter temperature in Celsius: "))

fahrenheit = (celsius * 9/5) + 32

print("Temperature in Fahrenheit:", fahrenheit)
print("\nKOMAL S049")
```

OUTPUT :

```
----- KESIAKI: C:/Users/INLO
Enter temperature in Celsius: 3
Temperature in Fahrenheit: 37.4

KOMAL S049
|
```

USING FUNCTIONS :

```
def fahrenheit(celsius):  
    return (celsius * 9/5) + 32  
  
celsius = float(input("Enter temperature in Celsius: "))  
  
print("Temperature in Fahrenheit:", fahrenheit(celsius))  
print("\nKOMAL S049")  
|
```

```
Enter temperature in Celsius: 4  
Temperature in Fahrenheit: 39.2  
  
KOMAL S049  
|
```
